Important Safety Instructions

The following symbols and labels are used throughout this manual to indicate immediate or potential safety hazards. It is the owner’s and installer’s responsibility to read and comply with all safety information and instructions accompanying these symbols. Failure to heed safety information increases the risk of personal injury, property damage, and/or product damage.

August 2011
Special Notes for European Consumers:
Do not dispose of this product as unsorted municipal waste. Collection of such waste for special treatment is necessary. It is strictly prohibited to dispose of this unit in domestic household waste. Disposal options:
1. Some municipalities have established collection systems to collect electronic waste for disposal.
2. Your purchase point retailer (or manufacturer) may take back the unit for disposal.
3. Used products contain valuable resources and can be sold to scrap metal dealers.

Illegal disposal in forests and landscapes endanger your health and the environment. Hazardous materials leak into ground water.

USER INSTRUCTIONS

UNIT’S COMPONENTS

NOTE: Before using your unit, please read all instructions and familiarize yourself with all the features and how they operate.

INDOOR UNIT

OUTDOOR UNIT

DISPLAY PANEL INDICATOR LIGHTS

INDICATOR LIGHTS:

AUTO Indicator: Lighted when the unit is in AUTO operation.
OPERATION Indicator: Lighted when the unit is in operation.
DIGITAL Display: When the air conditioner is in operation, the digital display show the current setting temperature and malfunction/protection codes.
DEFROST Indicator: Lights when the air conditioner begins defrosting automatically or when the warm air control feature is activated in heating operation.
TIMER: Lights during TIMER operation.

OPERATING INSTRUCTIONS

See Remote Control section for detailed remote control instructions.

</table>
IMPORTANT NOTES:
To receive maximum performance levels from your unit, see the following notes:

1. Operating your unit in conditions other than those suggested by the manufacturer may cause activation of safety features that may cause the unit to function abnormally.

2. If the unit operates in conditions in excess of 80% relative humidity, condensation may collect on the surface of the unit. If this should happen, set the vertical air flow louver to its maximum angle (vertical to the floor) and set fan mode on HIGH.

MANUAL OPERATION
Manual operation can be used temporarily if the remote control is disabled or maintenance is necessary.

NOTE: The unit must be turned off before operating the manual control button. If the unit is operational, press and hold the manual control button until the unit is completely turned off.

1. Open and lift up the front panel until a clicking sound is heard and the panel remains fixed.

2. Press the manual control button once and the unit will go into AUTO operation. Press the manual control button twice within five seconds and the unit will go into COOL operation.

3. Close the panel to its original position.

CAUTION
THE MANUAL CONTROL BUTTON IS USED FOR TESTING PURPOSES AND IS ONLY TO BE USED TEMPORARILY.

To restore remote control operation, use the remote control directly.

AIRFLOW DIRECTION CONTROL
Adjusting the unit’s airflow direction improperly may cause uneven room temperature.

The horizontal louver is adjusted with the use of the remote control. The vertical louver is manually adjusted.

To set the vertical airflow direction (up - down):

To perform this function, the unit must be in operation. By using the remote control, the horizontal louver can be moved a range of 6° for each press or swing up and down automatically. Refer to the Remote Control section in this manual for more details.

To set the horizontal airflow direction (left-right):

Disconnect power to the unit. Move the vertical louver manually to adjust the air flow in the direction you prefer.

For some models, the louver can be adjusted by using the remote control. Please refer to the Remote Control section in this manual for more details.
**CAUTION**

Do not operate the unit for extended periods with the airflow direction set downward, in cooling or dehumidifying mode as condensation may occur on the horizontal louver. This will cause moisture droplets to form and may cause damage to flooring or furnishings.

Do not manually adjust the horizontal louver unless it is a necessity. Always use the remote control to adjust the horizontal louver. (When restarting the unit immediately after the power was stopped, the horizontal louver may take 10 seconds to begin movement.)

If the horizontal louver is closed or nearly closed, the unit’s performance may be impaired from the restricted airflow. Do not operate the horizontal louver in closed position.

When the unit is initially connected to electrical power, the horizontal louver may emit a sound for approximately 10 seconds. This is normal operation.

**AIR CONDITIONER OPERATION**

**AUTO Operation:**

- When the unit is set to AUTO mode, Cooling, Heating (Cooling/Heating models only) or Fan Only operation will be automatic and is dependent upon the temperature you have selected and the room’s temperature.
- The unit will control the room temperature automatically at approximately the temperature point you selected.

- If the AUTO mode isn’t a comfortable setting for your room, you can manually select the desired settings.

**SLEEP Operation:**

- When the SLEEP button on the remote control is pressed during Cooling, Heating (Cooling only type with no heat) or AUTO operation, the unit will automatically increase (cooling) or decrease (heating) 2°F (1°C) per hour for the first 2 hours. It will hold that temperature for 5 hours and then the unit will stop operation. The fan speed is automatically controlled. This is usually the most comfortable temperature and the most energy saving.

**COOLING Operation**

**SLEEP operation**

- 7 hours timer off

**Set Temperature**

- 2°F (1°C)

1 hour

**HEATING Operation**

**SLEEP operation**

- 7 hours timer off

**Set Temperature**

- 2°F (1°C)

1 hour

**DRYING Operation:**

- The fan speed is automatically controlled during DRY operation.
- During DRY operation, if the room temperature is lower than 50°F (10°C), the compressor stops operation and restarts when the room temperature is above 54°F (12°C).

**OPTIMAL Operation:**

See notes below to obtain the maximum performance from your unit:

1. Do not adjust airflow direction to blow directly on occupants.
2. Adjust the temperature to achieve and maintain your comfort level. Do not adjust temperature to extreme temperature levels.

3. Ensure doors and windows are closed during unit’s operation in COOL or HEAT modes.

4. Use the remote control to set TIMER ON. This selects the time for the unit to begin operation.

5. Never place objects near the unit’s air inlet or outlet, since this may reduce the unit’s efficiency and may stop the unit’s operation.

6. Filter must be cleaned regularly to maintain the unit’s performance.

7. Do not operate unit with the horizontal louver in the closed position.

CARE AND MAINTENANCE

Cleaning the Grill, Case & Remote Control

Turn off the unit before cleaning.

**WARNING**

HIGH VOLTAGE!

DISCONNECT ALL POWER BEFORE SERVICING. MULTIPLE POWER SOURCES MAY BE PRESENT. FAILURE TO DO SO MAY CAUSE PROPERTY DAMAGE, PERSONAL INJURY OR DEATH.

NEVER USE WATER TO CLEAN THE INSIDE OF THE UNIT. EXPOSURE TO WATER CAN DESTROY THE INSULATION, LEADING TO POSSIBLE ELECTRIC SHOCK.

Wipe unit with a clean, soft, dry cloth. Never use bleach or abrasives on the unit.

NOTES:

- A cloth dampened with cold water may be used on the indoor unit if it is very dirty. Dry with a soft cloth.
- Do not use chemically treated cloths or dusters to clean the unit.
- Do not use benzine, thinner, polishing powder or similar solvents for cleaning. These may cause the plastic surface to crack or warp.
- Water hotter than 84°F (40°C) should never be used to clean the front panel. Using water hotter than recommended could cause discoloration or warping of the front panel.

Cleaning the Filter

A clogged air filter reduces the cooling efficiency of the unit.

*Clean filters every two weeks.*

1. Gently lift the indoor unit panel up to an angle until a clicking sound is heard.

2. Grasp the air filter handle and lift it up slightly to remove it from the filter holder and then pull downward.

3. Remove the air filter from the indoor unit and clean with a vacuum cleaner or rinse with water, allowing the filter to dry completely before reinstalling in the unit.
4. Insert the upper portion of the air filter back into the unit, making sure the left and right edges line up correctly. Place filter into position.

**Maintenance for Units Not in Operation**

*If the unit will not be used for a prolonged period of time, perform the following steps:*

1. Run the unit in FAN mode for approximately 12 hours to completely dry the inside of the unit.
2. Turn off the unit and disconnect the power.

**Checks Before Operation**

**WARNING**

*HIGH VOLTAGE!*

Disconnect ALL power before servicing. Multiple power sources may be present. Failure to do so may cause property damage, personal injury or death.

Never use water to clean the inside of the unit. Exposure to water can destroy the insulation, leading to possible electric shock.

1. Inspect the wiring for broken or disconnected wires.
2. Make sure the air filter is clean and installed correctly.
3. Make sure the air outlet and inlet is not blocked if the unit has not been used recently.

**CAUTION**

Do not touch the metal parts of the unit when removing the air filter. Injuries can occur when handling sharp, metal objects.

Remove the batteries from the remote control.

3. The outdoor unit requires periodic maintenance and cleaning and should be done by a qualified service technician. Contact your dealer or servicer.
TROUBLESHOOTING - NORMAL OPERATION

The following may occur during the normal operation of your unit.

1. Unit protection:
   
   **Compressor**
   - There is a 3-minute compressor protection delay. After the compressor stops operation, it will restart in 3 minutes.
   - The unit will blow cold air while in the HEAT mode, when the indoor heat exchanger is in one of the following situations and the set temperature has not been reached:
     a. When heating has just started.
     b. While defrosting.
     c. Low temperature setting.
   - The indoor or outdoor fan stops running when defrosting (Heating models only).

   **Defrosting** (Heating models only)
   - Frost may accumulate on the outdoor unit during heat cycle when the outdoor temperature is low and the humidity is high, resulting in lower heating efficiency of the unit. When this happens, the unit will stop heating operation and begin defrosting automatically.
   
   Defrost time may vary from 4 to 10 minutes, depending on the outdoor temperature and the amount of frost buildup on the outdoor unit.

2. A white mist coming out from the indoor unit.
   - This mist may generate due to a large temperature difference between inlet air and outlet air, while in the COOL mode in an indoor environment that has a high relative humidity.
   - This mist may also be generated due to moisture from the defrosting process (when the unit restarts in HEAT mode after defrosting).

3. Faint noises coming from the unit.
   - A low hissing sound caused when the compressor is running or has just stopped running. This is the sound of the refrigerant flowing or coming to a stop.
   - A low "squeak", when the compressor is running or has just stopped running. This is caused by heat expansion and cold contraction of the plastic parts in the unit, due to temperature changes.
   - When the unit is first turned on, you may hear the louver returning to its original position.

4. Dust is blown from the unit.
   - This is a normal condition when the air conditioner has not been used for a long time or during the first use of the unit.

5. An unusual smell comes from the indoor unit.
   - This is caused by the indoor unit giving off smells absorbed from building material, furniture or smoke.

6. The air conditioner migrates to FAN ONLY mode from HEAT or COOL mode.
   - When the indoor temperature reaches the temperature setting on the unit, the compressor will stop automatically and the unit turns to FAN only mode. The compressor will resume when the indoor temperature rises on COOL mode or falls on HEAT mode to the set point.

7. Dripping water may be generated on the surface of the indoor unit when cooling in a high, relative humidity setting (relative humidity higher than 80%). Adjust the horizontal louver to the maximum air outlet position and select HIGH fan speed.

8. Heating mode
   - The air conditioner draws in heat from the outdoor unit and releases it via the indoor unit during heating operation. When the outdoor temperature falls, heat drawn in by the air conditioner decreases accordingly. At the same time, heat loading of the air conditioner increases due to larger difference between indoor and outdoor temperature. If a suitable temperature is not achieved by the air conditioner, use of a supplemental heating device is suggested.

9. Auto-restart function
   - Power failure during operation will stop the unit completely. For unit without AUTO-RESTART, the OPERATION indicator on the indoor unit starts flashing, when power is restored. To resume operation, push the ON/OFF button on the remote control.
   
   For unit with AUTO-RESTART, the unit will resume automatically with all the previous settings preserved by the memory function, when power is restored.

10. Lightning or a wireless telephone operating nearby may cause the unit to malfunction. Push the ON/OFF button on the remote control to restart the operation.
# TROUBLESHOOTING & CORRECTIVE ACTIONS

If one of the following codes appear on the display, **STOP THE UNIT IMMEDIATELY.**
Disconnect the power and contact the nearest customer service center.

## FAULT CODES

<table>
<thead>
<tr>
<th>Code(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>E0, E1, E2, E3, E4, E5, E6, E7, E8 or P0, P1, P2, P3, P4, P6.</td>
</tr>
</tbody>
</table>

If any of the following problems are encountered, **STOP THE UNIT IMMEDIATELY.**
Disconnect the power and contact the nearest customer service center.

- Fuse blows frequently or circuit breaker trips frequently.
- Water/liquid or other foreign objects penetrate the unit.
- The remote control doesn’t work or works abnormally.
- If operation indicator or other indicators flash rapidly, disconnect the power and then reconnect it.

*Contact service if the rapid flashes continue after restarting.*

<table>

<td>Air inlet/outlet of indoor or outdoor unit may be blocked.</td>
<td>Clear obstructions and restart unit.</td>
</tr>
<tr>
<td></td>
<td>3 minute compressor protection has been activated.</td>
<td>Turn off unit. Wait at least 3 minutes and restart unit.</td>
</tr>
</tbody>
</table>

If the problem has not been corrected, please contact your local dealer or the nearest customer service center. Be prepared to tell them specific malfunctions and the unit model.

**DO NOT ATTEMPT TO REPAIR THE UNIT YOURSELF. ALWAYS CONSULT AN AUTHORIZED SERVICE PROVIDER.**

PERFORMANCE FEATURES:

1. Operating Modes: AUTO, COOL, DRY, HEAT (cooling only model without heat) and FAN.
2. Timer Setting Function in 24 hours.
3. Indoor Setting Temperature range: 62°F - 86°F (17°C - 30°C).
4. Full function LCD (Liquid Crystal Display).

REMOTE CONTROL FEATURES:

![Figure 1](image-url)
1. **TEMP Button ▼**: Press this button to decrease the indoor temperature setting.

2. **TEMP Button ▲**: Press this button to increase the indoor temperature setting.

3. **MODE Selection Button**: Each time the button is pressed, the operation mode is shifted in the direction of the arrow:

   ![Mode Selection Diagram]

   **NOTE**: COOL only model has no HEAT feature.

4. **SWING Button**: Press this switch button to activate auto swing feature of the horizontal louver. Push it again to stop.

5. **RESET Button**: When you press the recessed RESET button, all current settings are cancelled and the control will return to the initial settings.

6. **AIR DIRECTION Button**: Press this button to change the swing angle of the louver. The swing angle of the louver is 6° for each press. When the louver swing at a certain angle which would affect the cooling and heating effect of the air conditioner, it would automatically change the swing direction. No symbol will appear in the display area when this button is pressed.

7. **LED DISPLAY Button**: Press this button to clear the digit display in the air conditioner, press it again to illuminate (Not available for the units without LED display window).

8. **FAN SPEED Button**: Used to select the Fan Speed in four steps of AUTO, LOW, MED or HIGH. Each time the button is pressed, the fan speed mode is shifted.

9. **ON/OFF Button**: Press this button to start operation; press the button again to stop operation.

10. **TIMER ON Button**: Press this button to initiate the AUTO-ON time sequence. Each press will increase the auto-timed setting in 30 minute increments. When the setting time displays 10h, each press will increase the auto-timed setting in 60 minutes increments.

   To cancel the auto-timed program, simply adjust the auto-on time to 0.0.

11. **SLEEP Button**: Press this button to go into the Energy-Saving operation mode. Press again to cancel. This function can only be used on COOL, HEAT and AUTO modes and will maintain the most comfortable temperature for you.

   **NOTE**: While the unit is running under SLEEP operation mode, pressing the MODE, FAN SPEED or ON/OFF button will cancel the SLEEP operation mode.

12. **TIMER OFF Button**: Press this button to initiate the AUTO-OFF time sequence. Each press will increase the auto-timed setting in 30 minutes increments. When the setting time displays 10h, each press will increase the auto-timed setting in 60 minutes increments. To cancel the auto-timed program, simply adjust the auto-off time to 0.0.

13. **LOCK Button**: When you press the recessed LOCK button, all current settings are locked in and the remote control does not accept any operation except that of the LOCK. Press again to cancel the LOCK mode.

14. **TURBO Button**: When pushing this button on COOL mode, the air conditioner ramps up into a more powerful cooling operation. Push again to cancel the TURBO function. (Not available for air conditioners without TURBO function.)

**INDICATORS ON DISPLAY PANEL**

1. **DIGITAL DISPLAY area**: This area will show the set temperature and, if in the TIMER mode, will show the ON and OFF settings of the TIMER. If in the FAN mode, nothing will be displayed.

2. **TRANSMISSION Indicator**: This indicator flashes one time when remote control transmits signals to the indoor unit.

3. **ON/OFF Indicator**: This symbol appears when the unit is turned on by the remote control, and disappears when the unit is turned off.

4. **OPERATION MODE Indicator**: When the MODE button is pressed, the current operating mode is displayed: AUTO, COOL, DRY, HEAT (cooling only models without heat), or FAN mode.

5. **LOCK Indicator**: LOCK is displayed by pushing the LOCK button. Pushing the LOCK button a second time will clear the display.
6. **TIMER DISPLAY Indicator**: This display area shows the settings of the TIMER. If only the starting time of operation is set, it will display as TIMER ON. If only the ending time of operation is set, it will display as TIMER OFF. If both operations are set, it will show TIMER ON-OFF which indicates you have chosen to set both the starting time and ending time.

7. **FAN SPEED Indicator**: Press the FAN SPEED button to select the desired fan speed setting (Auto, Low, Med, or High). Your selection of Low, Med, or High will be displayed in the LCD window; Auto fan speed will not be displayed.

**NOTE**: All representations shown on the Display Panel graphic are for the purpose of familiarizing you with the display functions. During actual operation, only the relevant functioning displays are shown on the display panel.

### OPERATING THE REMOTE CONTROL

#### INSTALLING/REPLACING BATTERIES

**WARNING**

Do not mix old and new batteries. Do not mix alkaline, standard (Zinc-Carbon) or rechargeable (nickel-Cadmium) batteries.

The remote control uses two alkaline dry batteries (LR03X2).

1. To install the batteries, slide open the back cover of the battery compartment and install the batteries according to the polarity ( + / - ) as shown on the remote control.
2. To replace the old batteries, use the same method as mentioned above.

**NOTE:**

- When replacing batteries, do not use old batteries or a different type battery. Do not use a mixture of old and new batteries. This may cause the remote control to malfunction.
- If the remote control is not used for several weeks, remove the batteries. Otherwise, battery leakage may damage the remote control.
- Average battery life under normal use is approximately 6 months.
- Replace the batteries when there is no answering beep from the indoor unit or if the Transmission Indicator light fails to light.
- Do not dispose batteries as unsorted municipal waste. Collection of such waste separately for special treatment is necessary.

### AUTOMATIC OPERATION

Turn on the power. The OPERATION indicator lamp on the display panel of the indoor unit will begin to flash and will turn off after flashing 6 times.

1. Use the MODE button to select AUTO.
2. Push the TEMP button to set the desired temperature within a range of 62°F - 86°F (17°C - 30°C).
3. Push the ON/OFF button to start the air conditioner. The OPERATION lamp on the display panel of the indoor unit lights. The FAN SPEED is automatically set and there are no fan speed indicators shown on the display panel of the remote control.
4. Push the ON/OFF button again to stop the unit's operation.

**NOTE:**

- In the AUTO mode, the air conditioner can logically choose the mode of COOL, FAN and HEAT by sensing the difference between the actual ambient room temperature and the set temperature on the remote control.
- If the AUTO mode is not comfortable for you, the desired mode can be selected manually.

### COOL/HEAT (Cooling only model with no heat) and FAN Operation

1. AUTO mode setting can be manually overridden by setting the unit for COOL, HEAT or FAN mode.
2. Press the TEMP button to set the desired temperature within a range of 62°F - 86°F (17°C - 30°C).
3. Press the FAN SPEED button to select the FAN mode of AUTO, HIGH, MED or LOW.
4. Push the ON/OFF button and the operation lamp lights and the air conditioner starts to operate at your selected settings. Push the ON/OFF button again to stop this unit operation.

**NOTE:** The FAN mode cannot be used to control the temperature. While in this mode, only steps 1, 3 and 4 may be performed.

### DRY OPERATION

1. Push the MODE button to select DRY.
2. Push the TEMP button to set the desired temperature within a range of 62°F - 86°F (17°C - 30°C).
3. Push the ON/OFF button. The OPERATION lamp lights and the air conditioner starts to operate in DRY mode at LOW fan speed. Push the ON/OFF button again to stop the unit's operation.
**TIMER OPERATION**

Push the TIMER ON button to set the auto-on time and the TIMER OFF button to set the auto-off time.

1. To set the starting time:
   
   A. Push the TIMER ON button; the remote control shows TIMER ON, the last set time for the starting operation and the signal "h" will be shown on the DIGITAL DISPLAY area. You are now ready to reset the time to START the operation.
   
   B. Push the TIMER ON button again to set desired unit start time.
   
   C. After setting the TIMER ON, there will be a one-half second delay before the remote control transmits the signal to the air conditioner. After approximately another 2 seconds, the signal "h" disappears and the set temperature will reappear on the digital display.

2. To set the stopping time:
   
   A. Push the TIMER OFF button and the remote control will show TIMER OFF, the last set time for stopping operation and the signal "h" will be shown on the DIGITAL DISPLAY area. You are now ready to reset the time of the STOP operation.
   
   B. Push the TIMER OFF button again to set the time you want to stop the operation.
   
   C. After setting the TIMER OFF, there will be a one-half second delay before the remote control transmits the signal to the air conditioner. After approximately another 2 seconds, the signal "h" disappears and the set temperature will reappear on the digital display.

**SET THE STARTING & STOPPING TIME**

A. Push the TIMER ON button. The remote control will show TIMER ON, the last set time for START operation and the signal "h" will be shown on the DIGITAL display area. You are now ready to readjust the TIMER ON to start the operation.

B. Push the TIMER ON button again to set the time you want to start the operation.

C. Push the TIMER OFF button. The remote control will show TIMER OFF, the last set time for STOP operation and the signal "h" will be shown on the DIGITAL display area. You are now ready to reset the time to STOP operation.

D. Press the TIMER OFF button again to set the time you want to stop the operation.

E. After setting the TIMER, there will be a one-half second delay before the remote control transmits the signal to the air conditioner. After approximately another 2 seconds, the signal "h" disappears and the set temperature will reappear on the digital display.

**Changing the TIMER**

- To change the TIMER ON/OFF time, press the corresponding TIMER button and reset the time.
- To cancel the TIMER ON/OFF setting, adjust the TIMER time to 0:00.

**NOTE:** The time entered on this function is not the current, real time. It is the time you want to program the unit to automatically begin and end operation.

To receive the maximum performance from your unit, please read and follow the following cautions.

---

**CAUTIONS**

- Ensure there are no obstacles between the remote control and the receiver of the indoor unit.
- Keep the remote control away from liquids.
- Do not expose the remote control to high temperatures or to radiation.
- Keep the indoor received out of direct sunlight.
- Remote control should be kept away from EMI (electro-magnetic interference) as is present in some household appliances.

---

*Due to our commitment to continuing improvement, design and specifications are subject to change without prior notice.*
